

Drumulator

Thank you for purchasing this EMU Drumulator VST instrument.

The EMU Drumulator is a legendary drum machine capable of utilizing sample EPROM chips to increase its sound library. In this VST you have all of the EPROM chips to use direct within your DAW. The warm 12bit samples will add character and 80s authenticity to your productions and all in a nice & easy to use GUI. And again, all for very little money.

The Various ROM Hits are a bonus bank of effected ROM samples from the Drumulator.

Drumulator

NOTE: Please place the included fonts into you 'FONTS' folder on your computer. This will show the correct display like what is shown above.

To Install the VSTi: Place the entire folder into your VST plugins folder. When you then start your DAW, it will automatically be integrated within your setup.

For Logic and Sierra users, please download the installation guide which includes the OSX Validation Tool. It can be found on the VST instruments page of the Beat Machine website.

I hope you enjoy this VSTi release.

We are always interested in hearing any productions where you use any of our instruments or samples. Send us a link to info@beatmachine.co.uk or find us on Sound Cloud as Beat Machine Drum Sample Packs.

*Finally, may we ask you to **please not illegally share, duplicate or modify** this instrument in any way. Illegal distribution will only jeopardise future releases. Thank you.*
