

Thank you for purchasing this **Roland CR Drum Computer VST** instrument.

In this VST you will get the unmistakable 70s sound of the Roland CR8000, CR68 & CR78 CompuRhythm Drum machines and also the 80s CR1000 Digital Drummer Drum Machine, with the high quality original samples from the 4 machines.

You have 20 preset loops which you can toggle on or off using the buttons. These are set rhythms for you to play over if composing ideas on your keys or guitar. The demo shows a few well known loops (all created with the VST).

You can select which classic drum machine you want to play with and then program your own patterns within your DAW.

NOTE: Please place the included fonts into you 'FONTS' folder on your computer. This will show the correct display like what is shown above.

To Install the VSTi: Place the entire folder into your VST plugins folder. When you then start your DAW, it will automatically find the VST, ask for the serial number and then it will be integrated within your setup.

For Mac users, please refer to the download the installation guide which includes the OSX Validation Tool & Hosting AU tool. It can be found on the Beat Machine website.

I hope you enjoy this VSTi release.

We are always interested in hearing any productions where you use any of our instruments or samples. Send us a link to sales@beatmachine.co.uk or find us on Sound Cloud as Beat Machine Drum Sample Packs.

*Finally, may we ask you to **please not illegally share, duplicate or modify** this instrument in any way. Illegal distribution will only jeopardise future releases. Thank you.*
