

Thank you for purchasing this Synthwave VST instrument.

If like me you love the sound of Synthwave and the pulsating rhythms of such producers as Mitch Murder, Com Truise & Futurecop!, then this VST is for you.

In the VST you get 3 full drum kits, and a huge collection of synthwave basses, soaring synths, lush pads and computer blips. Just whack on the sidechain compression, fire up Outrun on the Atari and feel that 80s synth vibe!

NOTE: Please place the included fonts into you 'FONTS' folder on your computer. This will show the correct display like what is shown above.

To Install the VSTi: Place the entire folder into your VST plugins folder. When you then start your DAW, it will automatically be integrated within your setup.

For Logic and Sierra users, please download the installation guide which includes the OSX Validation Tool. It can be found on the VST instruments page of the Beat Machine website.

I hope you enjoy this VSTi release.

We are always interested in hearing any productions where you use any of our instruments or samples. Send us a link to info@beatmachine.co.uk or find us on Sound Cloud as Beat Machine Drum Sample Packs.

*Finally, may we ask you to **please not illegally share, duplicate or modify** this instrument in any way. Illegal distribution will only jeopardise future releases. Thank you.*

PATCH LIST:
