U110 MODULE

Thank you for purchasing this 'Ronald' U110 VST instrument.

The U110 is an underestimated little PCM sound module. Using pretty much the same casing as the Roland R8M Drum Module, this little gem can also take the various sound cards that the larger U20 and D70 synthesizers use. This VST contains all of the factory presets from the U110 module. Patches 60-64 are empty 'multi-set' banks so there's nothing to sample from these. Check out patch 32 if you want those famous Prodigy strings!
A Low Pass Filter is included along with Reverb.

NOTE: Please place the included fonts into you 'FONTS' folder on your computer. This will show the correct display like what is shown above.
To Install the VSTi: Place the entire folder into your VST plugins folder. When you then start your DAW, it will automatically be integrated within your setup.
For Logic and Sierra users, please download the installation guide which includes the OSX Validation Tool. It can be found on the VST instruments page of the Beat Machine website.

I hope you enjoy this VSTi release.

We are always interested in hearing any productions where you use any of our instruments or samples. Send us a link to info@beatmachine.co.uk or find us on Sound Cloud as Beat Machine Drum Sample Packs.

*Finally, may we ask you to **please not illegally share, duplicate or modify** this instrument in any way. Illegal distribution will only jeopardise future releases. Thank you.*
